#### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

#### Status

- 1) Responsive to communication(s) filed on \_\_\_\_\_.

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1 and 2 are rejected under 35 U.S.C. 102(e) as being anticipated by Asada et al. (2004/0081437, which corresponds to the WO reference cited by applicant).

Asada discloses frame rate conversion of a video signal (noting particularly Figs. 6-8) that can be digital (section [0126]), wherein the system comprises a frame memory for a single frame (element 9 in Fig. 6);

Memory write and read control circuit 10 responsive to the vertical sync signal derived from the input video signal;

Stage 11 that generates a converted vertical sync signal applied to the frame memory signal for outputting the converted video signal, the period (i.e. pulse signal) comprising an integer frequency that can be designated "N" and derived from the input vertical sync signal of an integer that can be designated "M", where N is larger than M (e.g. section [0076] and signals a and b in Fig. 8);

stage 10 further providing frame memory read out with timed correspondence with the writing in, and timed with the vertical sync of the converted output frame rate (noting Figs. 7 and 8), thereby meeting claim 1.

As for claim 2, the output rate can be, for example, 60 Hz when the input is 24 Hz (section [0076] again).

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Victor R. Kostak whose telephone number is (571) 272-7348. The examiner can normally be reached on Monday - Friday from 6:30am-3:00pm.
